Hey Greg

Do you want to talk sometime today about this? Looks like your day is pretty busy. I'm open for most of it.

I think you're on the right track with people. I'll do some thinking and put some other names into the hat.

Eric

Eric – Here are some off-the-cuff thoughts on this. As you know, please work through supervisor's and for NRMRL, Kelly.

Surface water –suggest calling Jennifer OZ to get expertise in sampling/monitoring and maybe include a modeling rep too? NRMRL also has good surface water folks – maybe

ask Kelly

Drinking water – Darren Lytle, NRMRL – again, call Kelly first

Groundwater - I think Tom already reached out to Dave Burden of Ada?

Sediments – Alice Gilliland (NRMRL) has 1-2 people already in mind with sediment-metals fate and transport expertise, and, as I mentioned to you earlier, Barb Butler there may be the best ORD person in mine waste itself – we could offer that to Patti as well. Also, sediment tox via Dale Hoff in Duluth?

Let's try to line names to offer Patti today if possible.

Let's talk.

Greg

Patti –

I have a few ideas, but I would like to reach out into the Labs and get some nominations for you. Shall I proceed? Do you want to talk today first?

Subject: Your thoughts on surface water, groundwater and sediment expertise

Hi Greg,

I am now working as the Liaison Officer in Area Command in Durango and there have been conversations today about the need to start thinking of putting together a long term monitoring strategy for the watersheds potentially impacted by the Gold King Mine release. We are thinking that we would need to pull together a team of expertise in surface water, drinking water, groundwater and sediments and I wanted to informally reach out to you to see if you had any thoughts on specific names. I think it may take a couple of months for a team to develop this strategy. I was also wondering if OW could assist.

Thanks in advance for any thoughts you may have with this and I am also happy to give you a call to discuss in more detail.

Patti
